

AMENDMENTS TO SPECIFICATION

Please amend the Substitute Specification as follows:

[0069] Fig. 1 illustrates a preferred embodiment of a video game system 19 that includes crypto processor 52, memory cartridge 16, Internet 121 or other data transmission, modem 137/138, TV 11, and components housed in video game console unit 42. Crypto processor 52 ~~may~~ should be attached to the motherboard of video game console 42 or portable game system 44 so that attempts to replace processor 52 with an unauthorized processor would destroy traces within the motherboard. For clarity, the housing of unit 42 is not shown.
